Matriculation in Computer Science

2016-2017

PROJECTS

GoTo APP

"I played a key role in the development and enhancement of the GoTo Service Portal app in the Cayman Islands. As the GoTo Service Portal, we serve as the premier destination for sourcing local talent, seamlessly connecting vendors with residents across the three islands. Our user-friendly app, available on both Apple and Android devices, as well as through web browsers, offers a one-stop solution for a variety of services.

Hogi Wallet

I contributed to the development of an advanced Decentralized crypto wallet app, empowering users to seamlessly send and receive Ethereum and its tokens, conduct Bitcoin transactions, and add custom tokens. The app supports multi-wallet management, enabling users to create wallets using mnemonics, import existing accounts with mnemonics and private keys, and efficiently organize their diverse digital assets. It's a secure and user-friendly solution for cryptocurrency enthusiasts seeking flexibility and control in managing their portfolios.

Property Asia

I contributed to the development of the Property Asia app, a prominent real estate platform in Dubai. The app facilitates seamless property transactions, allowing users to buy, sell, and even bid on properties. Its user-friendly interface and innovative bidding feature provide a dynamic solution for individuals navigating the Dubai real estate market.

MUSH Social App (React Native)

As a key contributor to the MUSH Social app, a prominent social media platform originating from Saudi Arabia, I played a crucial role in enhancing its frontend functionality and user experience. My primary responsibilities included optimizing API responses on the front end, ensuring seamless communication between the backend Node API and the React Native frontend. Additionally, I led the implementation of new features such as image filters, drawing tools, and image cropping functionalities, which significantly enriched the app's capabilities and user engagement.
