## OFFICE PROJECTS

### Employee Management System(Frontend and Backend)

- Powerful work management software for teams. Get real-time insights on workforce analytics—work Distribution & Management with Workflow.
- My role in this project is to develop new user-facing features, determining the structure and design of web pages, building reusable codes and provide support and fix the UX bugs at front end .

### Electronic Health Record

- It allows physicians to access patient profiles in real-time, and assess progress at a glance. Physician-patient communication becomes faster, easier, and more seamless. Workflow, time management, and documentation become efficient, eliminating time-wasting searches for missing information. It enables physicians to bring information for an individual pat and their practice together on one device.
- My role in this project is to Integrate APIs in it and provide support and fix the UX bugs at front end.

### Hospital Management System

- Sustainable telemedicine at its best We prioritize value-based integrated remote care by empowering patients and providers through innovation. Our feature Safe, simple and efficient. Customizable across all specialties. Save valuable time without compromising on patient satisfaction.
- My role in this project is to develop new user-facing features, determining the structure and design of web pages, building reusable codes .
